

SIGILO GPS and Hour Meter
Model Number – SN-700

The Sigilo GPS and Hour Meter unit combines both location and equipment hours recording. This unit is ideal for gathering information on asset utilization, operational efficiencies maintenance reviews and location information. Management can choose to record information daily or in run-time 3-minute intervals. Information is automatically updated into your cloud account for viewing throughout your entire organization. This tracker combines the equipment runtime recording along with the location of equipment to provide a clear picture of the equipment’s value to profitability. Combining the SN-700 with the Sigilo APP will help you manage equipment maintenance, repair and inspection service events and produce reports that will highlight operational results.

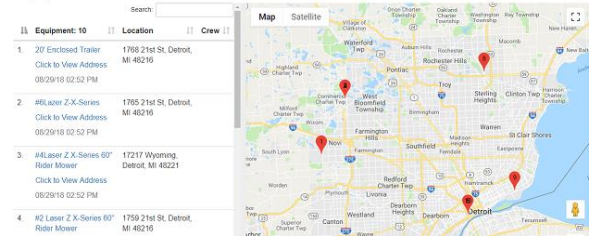

To add the GPS and hour meter to your Sigilo Fleet App please visit www.sigilofleet.com
